Portrait PSR Skin Tightening Treatment

Portrait is unlike any other treatment available today. It's not a laser, radio frequency, or a light-based therapy. It is plasma energy technology that works both on and below the surface of the skin to modify the skin's architecture so that new collagen is generated. Portrait PSR reduces fine lines and deep wrinkles, and improves the skin's tone and texture while it tightens and resurfaces your skin.

(Consultation required before receiving this treatment.)
